

CuLam Barrier Wrap (size 30" x 8')

Dimension 30 inches wide x 8 feet long: Fits poles 30' to 40' long with a maximum butt size of 18" diameter.

Slip the barrier wrap on to the pole. Snug it up using the double-sided tape that is affixed along the edge. It is preferable to set the pole then trim the barrier wrap to a height of 6" above groundline. After final set depth has been determined, wrap the self-fusing silicone tape around the pole and barrier to tightly seal the top. Applying the final top seal before setting the pole is acceptable but exact knowledge of final set depth is critical to assure proper installation.
